TECHNICAL SKILLS

Languages: SQL, Python

Libraries & Tools: Pandas, Tableau, Excel (PivotTables, Charts), Snowflake, Google Sheets

Analytics Skills: Exploratory Data Analysis (EDA), Data Cleaning, Data Visualization, KPI Reporting, Statistical Analysis, Business Intelligence (BI), Cohort Analysis, Stakeholder Reporting, A/B Testing, Pre/Post Analysis

WORK HISTORY

Data Analyst Externship — Remote

October 2025 – December 2025

- Completed a data analyst externship within the Customer Success org at a healthcare SaaS company, focused on improving operational efficiency and reducing customer wait times.
- Conducted pre/post analysis on support call logs across two product release windows using SQL (CTEs, GROUP BY, time-series aggregations), measuring baseline call volume against post-release spikes to identify the connection between feature launches and increased support demand.
- Recommended increasing on-call rep coverage from 7–9 to 12 agents ahead of product release windows to absorb volume surges; adjustments were implemented before the second release and directly drove a 55% reduction in average wait time, from 18 minutes to 10 minutes.
- Identified time-of-day demand patterns and provided shift-level staffing recommendations to better align rep coverage with peak call hours, reducing coverage gaps and increasing support capacity.
- Flagged self-service content gaps by analyzing call topic distribution; recommended targeted support articles and FAQs to deflect repeat inquiries, which were adopted by the team and contributed to a downward trend in overall call volume and contact rate.
- Presented findings to VP-level leadership across multiple formats (Tableau dashboard, slide deck, and written reports), tailored for both technical and non-technical audiences.

Customer Success Specialist, SimplePractice — Remote

November 2024 – December 2025

- Maintained a 95% customer satisfaction (CSAT) score while identifying recurring patterns in support tickets to inform process improvements.
- Tracked and categorized support issues using Zendesk; analyzed ticket data to identify recurring trends that proactively reduced repeat contact rates.

Teacher, Greater Seattle School Districts — Washington

November 2019 – August 2024

- Tracked student performance and engagement trends across cohorts using Excel and Google Sheets, identifying at-risk students early and adjusting instructional strategies based on data findings.
- Built and maintained relationships with 30+ stakeholders including administrators, colleagues, and parents, using structured feedback and regular updates to surface concerns early.
- Facilitated training for 20+ staff members on a new communication platform (ParentSquare), achieving high adoption and improving information flow across teams.

PROJECTS

Customer Churn ETL Pipeline & Analysis

May 2026

- Built an end-to-end ETL pipeline using Python, the Google Sheets API (gsread), pandas, and SQLAlchemy to extract, clean, and load 63,500 rows of telecom customer data into MySQL.
- Cleaned inconsistent values across multiple columns, replaced blank strings with proper nulls, removed duplicates, and filled missing values using column medians before any analysis began.
- Used SQL (CTEs, GROUP BY, CASE WHEN) to identify key churn drivers; Month-to-Month customers churned at 36%, and customers on mismatched plans churned at up to 68.58%.
- Built a four-page Tableau dashboard connected directly to MySQL via a live connection, organizing findings by tenure, contract type, monthly charges, and plan mismatch.

Student Mental Health EDA

April 2026

- Conducted exploratory data analysis (EDA) on student mental health survey data (N=101) using Python and Pandas, applying groupby aggregations and descriptive statistics to uncover correlations between depression, anxiety, and academic performance.
- Identified and resolved data quality issues, including duplicate categories caused by trailing whitespace and inconsistent casing, using Pandas string methods (str.strip(), str.lower()), ensuring data integrity and accurate analysis.
- Built a Tableau dashboard visualizing key findings including CGPA distribution by depression status, treatment-seeking behavior, and anxiety rates by student year group, communicating actionable insights to non-technical stakeholders.

Restaurant Sales Analysis

March 2026

- Partnered with a local restaurant owner to analyze point-of-sale (POS) data and surface actionable business intelligence for a non-technical stakeholder.
- Used SQL (GROUP BY, RANK() window function) to identify peak and slow sales periods and rank menu items by units sold and revenue contribution; recommended a targeted promotion that drove a 20% revenue increase during slow hours.
- Built Excel PivotTables and charts to visualize hourly sales trends and top items by revenue; presented findings directly to the owner to support data-driven business decisions.

Compensation Benchmarking Analysis

February 2026

- Analyzed employee compensation data for a fictional healthcare company to identify pay variance across roles and departments.
- Used SQL (CTEs, RANK() with PARTITION BY, STDDEV) to identify that Data Engineers had the highest pay variance across all roles with a \$151K salary range; recommended role tiering to reduce compensation inequity.

SQL Case Study: Support Call Analysis

January 2026

- Conducted pre/post analysis on support call logs to measure the operational impact of two product releases on call volume and support demand.
- Used SQL (CTEs, CASE WHEN, JOINs) to compare pre- and post-release support metrics; identified a 38% rise in billing calls/day and 17% rise in login calls after two product updates, informing recommendations that reduced customer friction risk.
- Built a Tableau dashboard visualizing call volume and average call length trends before and after each release, enabling stakeholders to quickly identify which updates drove the highest support demand.

EDUCATION & CERTIFICATIONS

Master of Education — University of Washington, Seattle, WA

Graduated

Bachelor of Arts in Education — University of Washington, Seattle, WA

Graduated

Certifications: Google Project Management Certificate | Zendesk Support Suite | Salesforce | WA State Education Certificate
