WORK HISTORY

Jr. Business Intelligence Analyst, Transfr — *Remote* *July 2026 – October 2026*

- Rebuilt last-touch attribution logic in BigQuery using SQL, LookML, and Gemini, so every deal has a credited owner, correcting skewed attribution reporting; presented before-and-after results to the Director of RevOps as well as Marketing and Sales leadership to support quarterly quota attainment reviews and lead generation investment strategy discussions.
- Delivered weekly snapshot reports and dashboards on account renewals, account tier and ownership changes, and onboarding projects for the Sr. Director of CS Operations, used in weekly executive leadership meetings.
- Expanded a BigQuery and LookML survey model to bring in disparate data sources for multiple survey types, then partnered with a customer-facing Professional Services team to build self-serve Looker Studio reports that showcase each customer's event survey ratings and feedback; created end-to-end user documentation that enables the team to build and maintain reports without BI support.
- Queried, cleaned, and modeled data from multiple source systems consolidated in BigQuery, and handled ad hoc requests from RevOps, Sales, Finance, Marketing, Customer Success, and Product/Engineering stakeholders through a request queue and data office hours, delivering dashboards, queries, and reports.
- Built a Looker dashboard for the Customer Success team to track customer product utilization across hardware and mobile/web app usage to pinpoint adoption gaps.
- Began building dbt models alongside the data engineering team to publish reusable BigQuery views that keep the team aligned on one shared set of definitions and code.
- Partnered with BI leadership to scope and construct an organization-wide reporting roadmap.

Data Analyst Externship, SimplePractice — *Remote* *October 2025 – December 2025*

- Used SQL to analyze support call logs for a healthcare SaaS company across two product release windows, measuring baseline call volume against post-release spikes to identify the connection between feature launches and increased support demand.
- Recommended increasing on-call rep coverage from 7–9 to 12 agents ahead of product release windows to absorb volume surges; coverage was increased before the second release, leading to a significant reduction in wait time.
- Presented findings to VP-level leadership across multiple formats (Tableau dashboard, slide deck, and written reports), tailored for both technical and non-technical audiences.

Customer Success Specialist, SimplePractice — *Remote* *November 2024 – December 2025*

- Tracked and categorized support issues using Zendesk; analyzed ticket data to identify recurring trends that proactively reduced repeat contact rates.

Teacher, Greater Seattle School Districts — *Washington* *November 2019 – August 2024*

- Tracked student performance and engagement trends across cohorts using Excel and Google Sheets, identifying at-risk students early and adjusting instructional strategies based on data findings.

TECHNICAL SKILLS

- **Languages:** SQL, Python (pandas, SQLAlchemy)
- **Data & BI Tools:** BigQuery, Looker (LookML), Looker Studio (Google Data Studio), dbt, Tableau, MySQL, Snowflake, Excel, Google Sheets
- **Source Systems:** Salesforce, HubSpot, NetSuite, Qualtrics
- **Analytics:** GTM (Go-to-Market) Analysis, Pipeline & Funnel Analysis, KPI Reporting, Dashboard Development, Pre/Post Analysis, Self-Serve Reporting, Exploratory Data Analysis (EDA)

PROJECTS

Customer Churn ETL Pipeline & Analysis *May 2026*

- Built an end-to-end ETL pipeline (Python, Google Sheets API, pandas, SQLAlchemy) to extract, clean, and load 63,500 rows of telecom customer data into MySQL, resolving inconsistent values, blank strings, duplicates and missing values before analysis.
- Used SQL (CTEs, GROUP BY, CASE WHEN) to identify churn drivers; Month-to-Month customers churned at 36%, and customers on mismatched plans churned at up to 68.58%.
- Built a four-page live Tableau dashboard connected directly to MySQL, organizing findings by tenure, contract type, monthly charges, and plan mismatch.

Other Projects: SQL Support Call Case Study, Student Mental Health EDA, Restaurant Sales Analysis, Compensation Benchmarking

EDUCATION & CERTIFICATIONS

M.Ed. and B.A. in Education — University of Washington, Seattle, WA *Graduated*
Certifications: Google Project Management Certificate | Salesforce
